# ANTI SPILL TRAY LINE F

The ANTI-SPILL TRAY LINE "F" is a PVC canvas tray with semi-rigid edges of high-density foam rubber. It is portable, compact and with fast-assembly for containment and absorption of hydrocarbon spills, allowing an effective control.

## APPLICATIONS

Ideal to be used in maintenance of all types of machinery in the field (mining, oil, airport, agriculture and other industries). It is designed to retain all types of spilled fluids due to overflowing or leaking of industrial machines, mechanical equipment, industrial vehicles, and similar devices.

Its main function is to prevent these substances from causing a spill to reach soil, avoiding serious environmental contamination.

In case of spill, the oil can be removed from the tray by using the absorbent Loose Fiber Crunchoil, thus keeping the tray clean.

## Resistance to chemical products:

Resists attack from most acids and inorganic salts. It is not broken down by oils, alcohols, aliphatic hydrocarbons and fatty acids. It is broken down (totally or partially) by chlorinated solvents, ketones, aromatic hydrocarbons and some aldehydes.

## Resistance to traffic:

Due to its flexible edges (semi-rigid), it supports the traffic of people and light vehicles, with precaution that it is not placed on sharp objects that may cause breakage.
